

## Claims

1. Beverage can with an upper can collar (13) surrounding a can opening closed by a closing member (16),  
  
characterized by  
  
a drinking cap (20) to be clamped onto the can collar (13) and having a drinking opening (24).
2. The beverage can of claim 1, wherein the drinking cap (20) includes an additional container (30).
3. The beverage can of claim 2, wherein the additional container (30) is set into the drinking opening (24) of the drinking cap (20) in a clamping manner, filling the drinking opening.
4. The beverage can of claim 2 or 3, wherein the additional container (30) has a tear-open cover wall (34).
5. The beverage can of one of claims 2-4, wherein the additional container (30) has a flange-like rim (33) extending laterally beyond the edge of the drinking opening (24) of the drinking cap (20).
6. The beverage can of one of claims 1-5, wherein the drinking cap (20) comprises a funnel (25) to be supported on the top wall (14) of the beverage can, the funnel guiding liquid from the can opening to the drinking opening (24).
7. The beverage can of claim 6, wherein the funnel (25) has a funnel opening (26) at the lower end that contacts the can opening with form fit.
8. The beverage can of claim 6 or 7, wherein the funnel opening (26) is narrower than the can opening.

9. The beverage can of one of claims 1-8, wherein the drinking cap (20) has a circumferential wall (21) with an inner bead (22) snapping behind the can collar (13).
